Press Release

New FirstNet Cell Site Launches in Angle Inlet, the Northernmost Point of the Contiguous 48 States, to Support First Responders

New Infrastructure Will Help Advance Public Safety, Improve Connectivity for Area Residents and Visitors in Remote Northern Minnesota

ANGLE INLET, Minn., Dec. 9, 2021

What's the news? First responders in the Northwest Angle are getting a major boost in their wireless communications thanks to the [FirstNet®](#) network expansion currently underway by [AT&T*](#). We've added a new, [purpose-built cell site](#) in Angle Inlet – the northernmost point of the contiguous 48 states.

This FirstNet site will serve those traveling along Inlet Road NW and Pine Creek Drive NW in Angle Inlet – a community in Lake of the Woods County – as well as those fishing or recreating on the nearby lake. This site will also give first responders on FirstNet – America's public safety network – access to *always-on*, 24-hours-a-day priority and preemption across voice and data.

Angle Inlet is part of the Northwest Angle of Minnesota, the only place in the continental United States north of the 49th parallel. The community is the northernmost census-designated place in the contiguous 48 states. The Northwest Angle cannot be reached from the rest of the United States without either going through Canada or crossing water – specifically Lake of the Woods.

Why is this important? We look at FirstNet as the most important wireless network in the country because it's serving our first responders, including in remote areas like Angle Inlet. And unlike commercial networks, FirstNet provides dedicated mobile broadband. To ensure AT&T and the First Responder Network Authority (FirstNet Authority) are putting coverage and capacity where first responders need it most, the FirstNet build is being done with direct feedback from state and local public safety officials. This helps ensure Minnesota first responders connect to the critical information they need – every day and in every emergency.

FirstNet sites already launched in communities across Minnesota including Bagley, Baudette, Blackduck, Cloquet, northwest of Ely (Echo Trail), Faribault, Isabella, Peterson, Finlayson, Graceville, Grand Marais (Gunflint Trail), Grygla, Hovland, Kellogg, Lewiston, Orr (Kjostad Lake), Tofte (Lichen Lake), Togo and Williams.

Press Release

What are the benefits to first responders? Building upon [AT&T's current and planned investments](#) in Minnesota, we're actively extending the reach of FirstNet to give agencies large and small the reliable, unthrottled connectivity and modern communications tools they need. These sites were constructed using Band 14 spectrum, as well as AT&T commercial spectrum. Band 14 is nationwide, high quality spectrum set aside by the government specifically for FirstNet. We look at Band 14 as public safety's VIP lane. In an emergency, this band – or lane – can be cleared and locked just for FirstNet subscribers. That means only those on the FirstNet network will be able to access Band 14 spectrum, further elevating their connected experience and emergency response. Band 14 has been added on more than 700 existing sites across Minnesota, including markets such as the Twin Cities, Duluth, Rochester, Mankato, the Iron Range, St. Cloud and the Brainerd/Baxter area.

How does this help Minnesota residents? This new infrastructure will also help improve the overall coverage experience for AT&T wireless customers in the area. Residents, visitors and businesses can take advantage of the AT&T commercial spectrum bands, as well as Band 14 when capacity is available.

What is FirstNet? FirstNet is the only nationwide, high-speed broadband communications platform dedicated to and purpose-built for America's first responders and the extended public safety community. Shaped by the vision of Congress and the first responder community following the 9/11 terrorist attacks, FirstNet stands above commercial offerings. It is built with [AT&T](#) in public-private partnership with the FirstNet Authority – an independent agency within the federal government. The FirstNet network provides public safety truly dedicated coverage and capacity when they need it, including unique benefits like *always-on* priority and preemption, and high-quality Band 14 spectrum. These advanced capabilities enable FirstNet to help fire, EMS, EMA, law enforcement and 9-1-1 personnel save lives and protect their communities.

What people are saying:

Paul Weirtz

President, AT&T Minnesota

"We are excited to launch this new FirstNet site in Angle Inlet and provide critical wireless coverage in the northernmost point of the continental United States. Minnesota's first responders deserve reliable coverage across the state, especially in remote areas like the Northwest Angle, to help them effectively and efficiently address incidents. With FirstNet,

FIRSTNET[®]

Press Release

that’s exactly what they’re getting. We have a [responsibility](#) unlike any other network provider, and we couldn’t be more pleased to support the public safety mission by bringing first responders, residents and visitors in Angle Inlet greater access to the connectivity they need.”

Edward Parkinson

CEO, FirstNet Authority

“FirstNet is a dedicated broadband platform for public safety, by public safety. We worked hand-in-hand with the Minnesota public safety community to understand their needs for the network. And this new site in the remote and isolated Northwest Angle is a prime example of how that input and feedback is becoming reality. We look forward to supporting Minnesota’s first responders’ use of FirstNet to help them protect our communities when moments matter most.”
